WordPress Users and Roles

Website Settings · https://wiweka.dev/tutorial/website-settings/wordpress-users-and-roles/

WordPress is a popular content management system (CMS) used by millions of web masters for websites and blogs. There are various types of WordPress users who have different roles and privileges while using the CMS. In this guide, we will talk about the different kinds of users, their rights and roles, and how to setup or create users in the WordPress dashboard.

WordPress users and roles are essential components for controlling access, permissions, and responsibilities within your website. Understanding how to manage users and assign appropriate roles can help you maintain site security, streamline content creation, and facilitate collaboration. In this tutorial, we will explore the functionality of WordPress users and roles, providing guidance on user management and role assignments.

Accessing the Users Section

1. **Navigate to Users**: Log in to your WordPress dashboard and go to the “Users” section to access user management functionalities.
2. **Viewing User List**: Explore the list of existing users on your WordPress site, including administrators, editors, authors, contributors, and subscribers.

Adding New Users

Using the WordPress dashboard is relatively straightforward. The steps for adding a new user are as follows:

- **Log into the dashboard** with admin credentials.
- **Go to the 'Users' tab** on the left side of the dashboard.
- **Creating User Accounts**: Click on the “Add New” button to create new user accounts by entering their username, email address, and assigning a password.
- **Assigning Roles**: Select the appropriate role for the user, such as administrator, editor, author, contributor, or subscriber, based on their responsibilities.

- **Click 'Add New User'** to save your changes.

Once you've added a user, they will receive an automatic message with their login credentials. They can then access the dashboard of your WordPress site.

Managing User Profiles

1. **Editing User Information**: Modify user profile details, such as display name, contact information, and biographical information, as needed.
2. **Resetting Passwords**: Reset user passwords or send password reset links to users who have forgotten their login credentials.

Understanding User Roles

First, let's have a look at the different kinds of users in the WordPress CMS and the privileges associated with them.

1. **Administrator**: Administrators are the top-level WordPress users. They have the highest rights and privileges, allowing them total control over the WordPress site they are assigned to. This includes installing and deleting themes and plugins as well as performing other configurations for the site. Full access to all site settings, features, and content. Can manage other users, install plugins, and customize the site.
2. **Editor**: Editors have control over the content and structure of the website. They have the right to edit, delete and add content as well as approve other user's postings. They can also manage comments and manage categories, tags and other content-related features. Can publish, edit, and delete all posts and pages, as well as manage comments and moderate content.
3. **Author**: Authors can write and manage their own content only. They don't have a say in the content managed by other authors. However, they can manage their own comments under the admin panel. Can create, edit, and publish their own posts, but cannot modify or delete other users' content.
4. **Contributor**: Contributors are similar to authors but their postings require approval from an editor or admin before they are published. They cannot delete or edit their own content. Can write and edit their own posts but cannot publish them. Posts need to be reviewed and published by an editor or administrator.

5. **Subscriber**: Subscribers are the users who can only access the WordPress dashboard to edit their own profile and account information. They do not have any access to the more advanced features like posts or plugins. Can manage their profile and comment on posts but has limited access to site settings and content creation.

Custom User Roles

1. **Using Plugins**: Explore WordPress plugins that allow you to create custom user roles with specific permissions tailored to your site's needs.
2. **Assigning Capabilities**: Define custom capabilities and restrictions for new user roles to control access to certain features and content areas.

Conclusion

By now, you should have a good understanding of the different types of WordPress users and how to create new users in the dashboard. By effectively managing WordPress users and assigning appropriate roles, you can maintain a structured and secure environment for content creation, collaboration, and site maintenance. Understanding the privileges and responsibilities associated with each user role enables you to delegate tasks, enforce security measures, and create a seamless user experience for all individuals interacting with your WordPress site.
