Create and manage email accounts in cPanel

Domain & Hosting · https://wiweka.dev/tutorial/domain-hosting/create-and-manage-email-accounts-in-cpanel/

Introduction

Email is a fundamental tool for communication in both personal and business settings. With cPanel, a powerful web hosting control panel, you can easily set up and manage email accounts associated with your domain. This tutorial will walk you through the process of creating new email accounts and managing existing ones in cPanel, empowering you to establish a professional and efficient email communication system for your online presence.

Creating a New Email Account

1. **Log in to cPanel**: Access your cPanel account using the provided login credentials.
2. **Navigate to Email Accounts**: Locate the “Email” section in cPanel and click on “Email Accounts” to access the email management interface.
3. **Create a New Email Account**: Click on the “Create” or “Add Email Account” button to initiate the process of setting up a new email account.
4. **Enter Account Details**: Fill in the necessary information, including the desired email address, password, and mailbox storage quota.
5. **Additional Settings**: Customize additional settings such as mailbox size, email forwarding, and spam filters according to your preferences.
6. **Save Changes**: Once you have configured all settings, click on the “Create Account” or “Add Account” button to finalize the creation of the new email account.

Managing Email Accounts

1. **View Existing Accounts**: In the “Email Accounts” section of cPanel, you can see a list of all existing email accounts associated with your domain.

2. **Edit Account Settings**: To modify account settings such as passwords or storage quotas, click on the “Manage” or “Edit” option next to the respective email account.
3. **Delete Email Accounts**: If you need to remove an email account, select the “Delete” or “Remove” option to delete the account permanently.
4. **Manage Quotas**: Adjust the mailbox storage quotas for individual email accounts to optimize storage usage and prevent exceeding limits.

Conclusion

By following the steps outlined in this tutorial, you have acquired the knowledge and skills necessary to create and manage email accounts effectively in cPanel. Establishing personalized email addresses for your domain enhances professionalism and credibility in your communication efforts. Take advantage of cPanel’s intuitive interface to streamline email management processes and improve overall communication efficiency.
